PROFESSIONAL SUMMARY

Third-year Software Engineering student with strong foundation in web development, design, and AI integration. Passionate about combining technical expertise with creative thinking to build engaging digital experiences. Seeking internship opportunity to apply knowledge to real-world projects and contribute to company growth.

EDUCATION

FPT University — Da Nang, Vietnam
Bachelor of Software Engineering — 09/2022 – Present

Phan Chau Trinh High School — Da Nang, Vietnam
Natural Sciences Major — 2020 – 07/2022

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, HTML5, CSS3
Frameworks & Libraries: Spring Boot, Tailwind CSS
Databases & APIs: MySQL, SQL Server
Tools & Source Control: Git, Figma
Languages: English (Working proficiency), Japanese (Beginner - JLPT N5 in progress)

EXPERIENCE

EcoDanaV2 – Electric Vehicle Rental Platform — *Team Leader*
Java 22, Spring Boot, MySQL, Maven, Thymeleaf, HTML, CSS, JavaScript, Bootstrap| VNPay, Tesseract OCR, Cloudflare AI, Google Maps

- Led 4-person team to build full-stack EV rental platform supporting three user roles: Customers, Owners, and Admins.
- Designed complete system architecture and database schema; implemented core booking/payment logic with Spring Data JPA.
- Engineered security system using Spring Security with OTP-based email verification for user authentication.
- Directed integration of VNPay payment gateway, Tesseract OCR ID verification, Cloudflare AI chatbot, and Google Maps location services.
- Managed Git workflow and coordinated full-stack development, delivering production-ready system with 9/10 final score.

AI-Integrated Learning Management System — *Full-Stack Developer*
Java 22, Bootstrap 5, HTML, CSS, JavaScript, MySQL, Google Gemini API

- Collaborated in 2-person team to build comprehensive LMS platform supporting Students, Teachers, and Admin roles.
- Developed backend server logic using Java Servlets, JPA/Hibernate, and JDBC; designed MySQL database schema.
- Built dynamic user interface with JSP, JSTL, and Bootstrap 5 for course management and video lectures.
- Integrated Google Gemini API to create 24/7 AI Assistant providing instant answers to student questions.
- Delivered fully functional platform enabling course enrollment, video streaming, assignment submission, and automated grading.

FruitShopOnline – Full-Stack E-Commerce Platform — *Full-Stack Developer*
Java 22, MySQL, HTML, CSS, JavaScript

- Developed full-stack e-commerce web application from scratch with user authentication and role-based access control.
- Implemented product CRUD operations, shopping cart functionality, and order management system.
- Built admin and seller management panels for product inventory control and account management.
- Applied MVC and DAO design patterns ensuring clean code organization, maintainability, and scalability.
- Established MySQL database connectivity using JDBC for reliable data persistence and transaction handling.
